What are the most widely used libraries available for making web apps with? What are the ones that are used by a majority of web app designers? I'm specifically interested in what the libraries for producing dynamic UI, client-side javascript code, and server-side javascript code. I'd also be interested in non-javascript libraries that are more common than writing your own javascript. A: SpringMVC - Caching, Session management and especially with JSPs (a prebuilt view framework). If you don't want to write your own JSPs, JSPex is a neat library that provides prebuilt JSPs for common tasks. AMD - Require.js is a common way of building modular, client side JS. djit - Widgets - the web-standard way to create dynamic UI's. A: jQuery - the de facto standard JavaScript library for client-side code, and for server-side code too. Q: Dynamic route configuration in Play Framework? I'm using Play Framework and I'd like to create / route that receive several parameters and then return the appropriate object based on a sortable list that I have. Something like this: /customers/{customers}/orders/{orders}/{customer.name} But of course this produces an error since the parameters are not static. Is there some way to define this kind of routes dynamically? In other words, I'd like to add a route /customers/{customerId}/orders/{orderId}/{customerName} when a user is logged in, for example. My routes file has: GET /{customer}/orders controllers.MyController.findOrders(customerId:String) And the {customer} variable is what I have to dynamically define it. A: If you are using Play's inheritance feature, you can implement a custom route with a trait: public trait CustomerRoute extends Controller { def findOrders

In order to solve that issue, I wanted to manually edit the install file and replace the version=OGRE 1.5 with the 1.7 version string. Unfortunately, I can't find a definition of the version string (it shows Ogre\_Version\_FULL in the Enigma GUI), and I don't know where to find a description of the OGRE\_VERSION\_FULL constant./\* \* iptables -- netfilter target module \* \* Authors: Diego Hidalgo \* Juha YrjÄ¶Ä¶ \* \* This program is free software; you can redistribute it and/or \* modify it under the terms of the GNU General Public License \* as published by the Free Software Foundation; either version \* 2 of the License, or (at your option) any later version. \*/ #ifndef \_XT\_IFLA\_MARK\_H #define \_XT\_IFLA\_MARK 3da54e8ca3
