Active@ KillDisk Ultimate 12.0.25 WinPE \_\_LINK\_\_

---

Description Active@ KillDisk (variously also "Active@ Drive Eraser", "Hard Drive Eraser", "Eraser for hard drives" ) is a graphical hard drive eraser software for secure formatting of hard drives without any possibility of following data recovery. It is a successor of System Eraser and uses a similar graphical interface. The boot disk version supports Secure Erase command ("format drive") which can be used to hardware erase the hard drive, without needing a DR disk. Its developers claim the software will be able to erase a drive (or partition) to the point where its formatting cannot be recovered even by forensic experts. Features Active@ KillDisk allows secure formatting of the hard drive to the point where no data can be retrieved from the drive (raw format) or to a full format (factory state). The software uses a low-level ATA command which can be used to erase the entire drive. The software eliminates the possibility of recovering the original data of the drive, making it one of the safest tools available for the purpose. Additional, the software can be used to securely wipe and empty the data on the storage devices, including removable drives and

---

SD cards. It can also securely erase storage media, including Compact Flash, Floppy, Compact Disk and DVD-R, DVD-RW. Activation The software includes a GUI installer and an.exe installer which can be run to erase the hard drives after booting from it. To start the software, click "Activate" on the graphical interface.
